Research Interests

My research interests focus on behavioral sciences, particularly applied to personal financial decision-making, pension education, and health-related behaviors. I address these topics primarily using experimental methods in conjunction with advanced econometric models.

In my current research agenda, I concentrate on experimental studies on Choice Architecture in the realm of pensions and credit. These studies provide insights into the types of simplifications that can be introduced to enhance citizens' well-being. In previous years, I have worked on various topics such as the emergence of new political parties, migration preferences, predisposition to lying, and spatial patterns in COVID contagion and premature mortality.

The materials to replicate my studies are hosted at the following link: <https://github.com/deniselaroze>
